

Sun shading system with WAREMA SecuTex fabric A2

Safety - beautiful and functional

Quality of Life – WAREMA.

WAREMA

SecuTex fabric A2

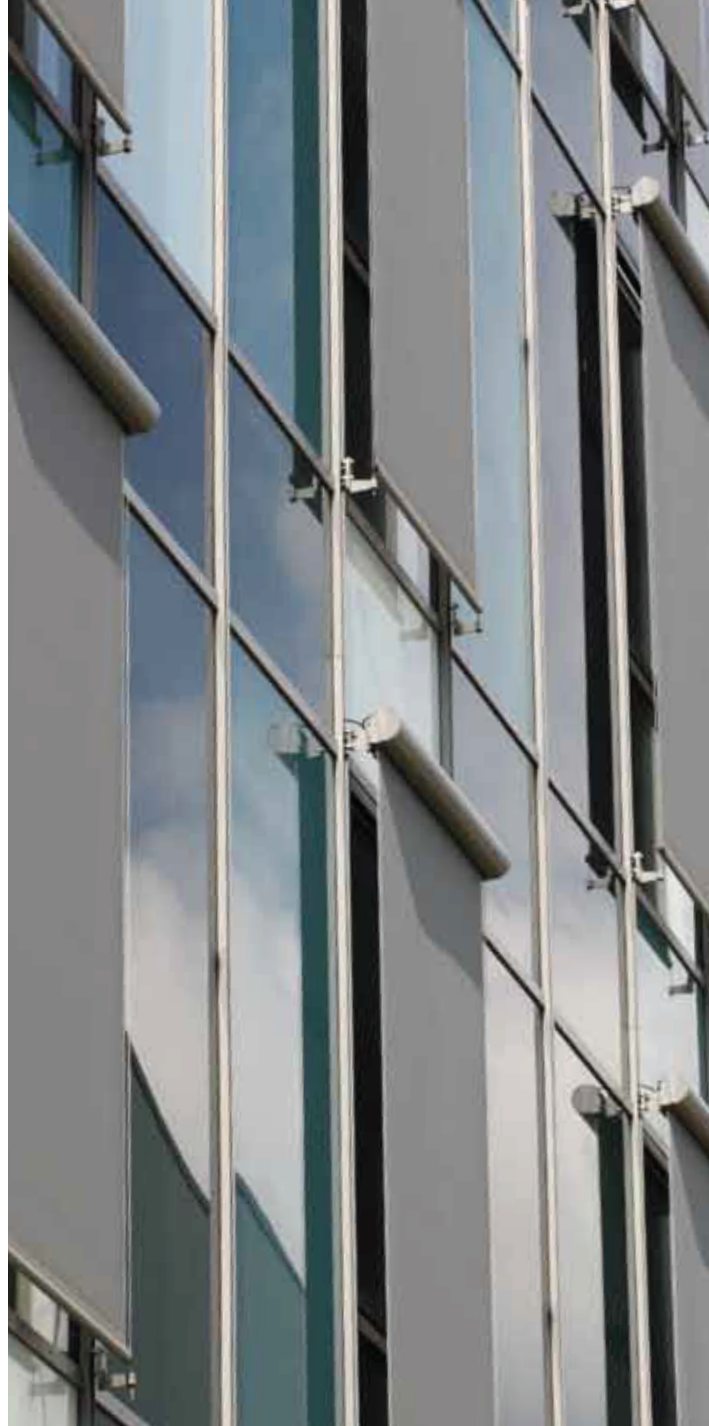

Safety with style

In the case of fire, not only flames but also toxic combustion gases are a big danger for life and limb.

Therefore minimisation of this danger already poses a risk during planning of building.

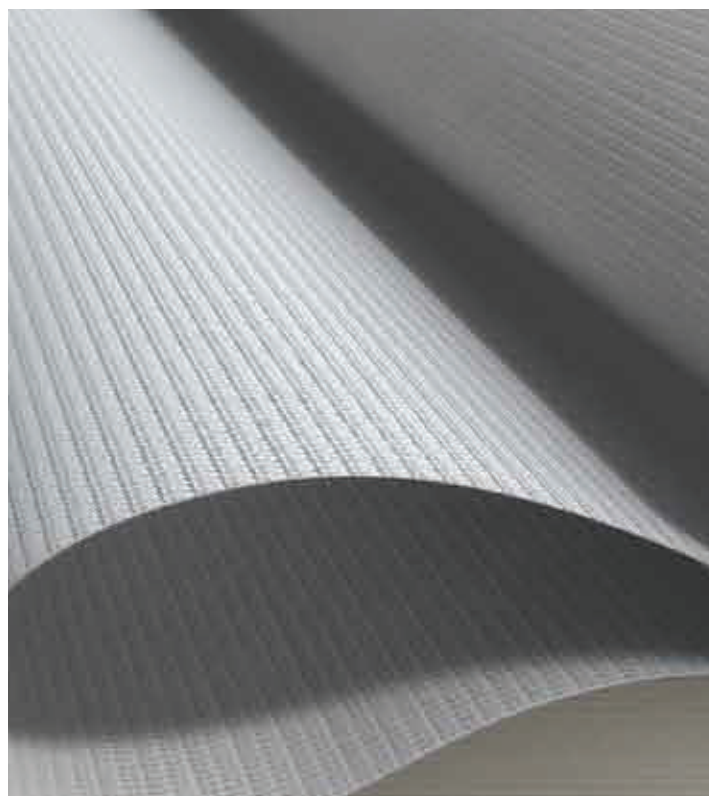

The sun shading system with WAREMA SecuTex fabric A2 makes a corresponding contribution. The glass cloth is coated with silicon and non-flammable. Apart from the high safety standards for a certification procedure it also fulfils all requirements concerning functional sun and glare control.

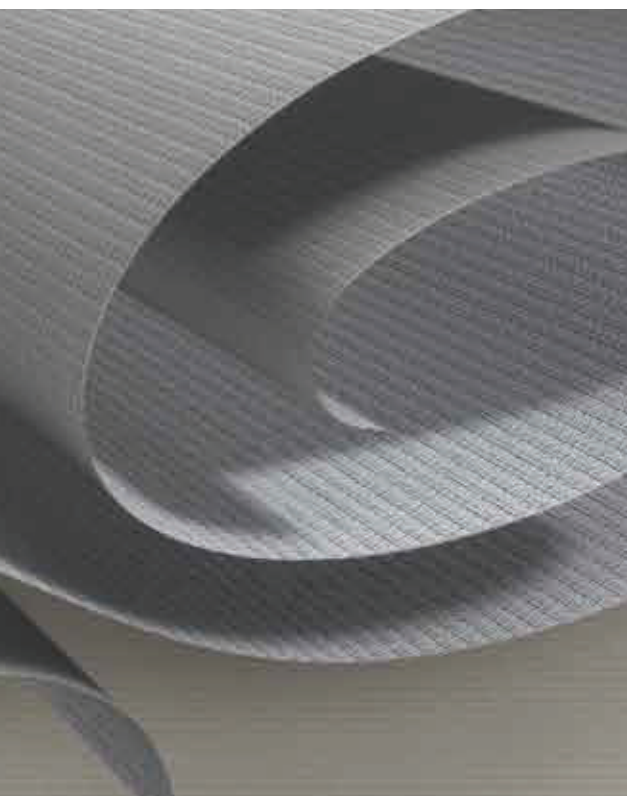

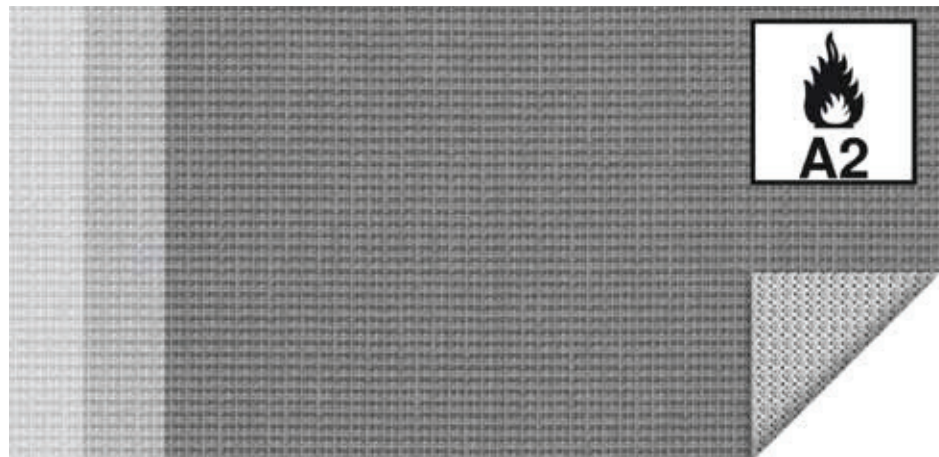

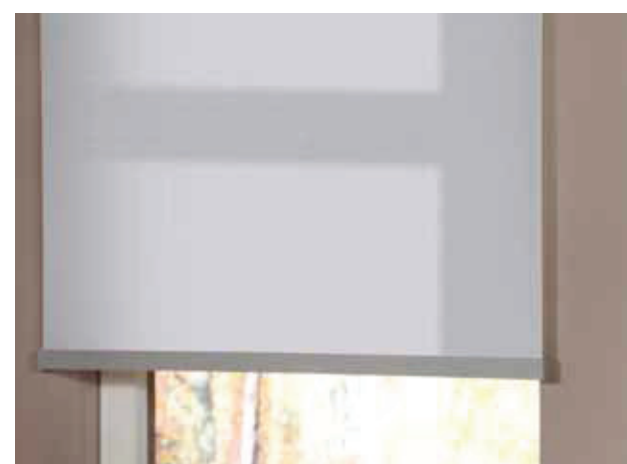

The WAREMA SecuTex fabric A2 is used both for indoor installation with object roller blinds as well as for outdoor installation for window awnings.

Your benefits:

- **Non-flammable** according to DIN 4102-1 A2
- In case of fire: **Minimum smoke development** without toxic combustion gases
- PVC and halogen-free
- **Odourless**
- **Weather-proof**
- Resistant to disinfection, washing and cleaning agent
- Can be used **indoors and** outdoors
- Minimises fire load

The WAREMA SecuTex fabric A2 does not only play an important role with preventive fire protection. The fabric also offers all characteristics of a powerful, modern sun shading system. It prevents annoying glare effects, reflects undesired heat radiations and still guarantees sufficient transparency. The fabric is available in different colours and evaporated with aluminium. The aluminium evaporation, a so-called low E coating, results in a corresponding advantage in the cold season - it helps keeping the warmth inside the room. Furthermore the fabric disposes of a little emissivity, is ecologically completely harmless and sustainable.
